For Immediate Release

Mobile Event App Provider, Gather Digital, Introduces Multiple CE Credits with Automatic Certificates

Chapel Hill, NC:

March 27, 2016 - Gather Digital has developed a new event app feature that allows conference planners to offer in-app tracking and reporting for continuing education (CE) sessions that support multiple credit types. The capability, integrated directly into the app, streamlines the process of tracking and awarding earned credits without the need for external education credit software.

The new feature rollout also includes a printable, personalized CE credits certificate sent automatically via email to each attendee who has earned credits. The certificate is additionally customizable by the organization, including logo, continuing education sponsor label and identification number, certificate signature, notes and optional attendee form.

Meeting planners may assign one or more credit types and amounts to each relevant session and define overall requirements for checking in. Attendee check-in may consist of entering a code or completing a survey within the app. Planners access a full report of all participant check-in activity. Attendees track progress of earned CE credits within the app.

Gather Digital has long been a leader in continuing education credits for mobile event apps. The new release allows for a more complicated continuing education program and enhanced reporting. The functionality is available to corporations and associations in single and multi-event apps.

ABOUT GATHER DIGITAL

Gather Digital provides best-of-breed mobile event apps for corporations, associations and educational institutions. Established in 2009, Gather Digital creates native and mobile web applications with an integrated system for continuing education credits, live polling, surveys, small group meetings, personalized itineraries and gamification.
