President and Director**

BIO:

**Keith A. Laskowski, M. Sc.
Position: President & Director**

Mr. Laskowski holds an MSC in Geology from the Colorado School of Mines and has over 30 years of experience in precious metals and base metals exploration, uranium exploration and mine geology. During the past 12 years, he created and directed Gallant Minerals Ltd., a private exploration company (formerly Harrods Minerals Ltd.), and served as President and Director of Solomon Resources, Northern Canadian Uranium Inc. and Amerix Precious Metal, all TSX Compa-

nies. Mr. Laskowski has also served as Country Manager - Haiti for Eurasian Minerals Ltd. from 2005 - 2009.

Company Profile:

Canadian Shield Resources Ltd. is a mineral exploration company building shareholder value through the acquisition of major scale, base and precious metal projects in prolific and established mineral provinces in Latin America. Efforts are primarily focused in Peru, a very prospective region ranking highly in the worlds production of gold (5th), silver (1st), copper (3rd), zinc (3rd) and tin (2nd). The Company controls 7 precious metals projects in Peru and one project in Chile. Three of the Peruvian projects were acquired through the 90% acquisition of Gallant Minerals Perú Ltd. S.A. in 2004. Two additional projects in Peru and the gold project in Chile were acquired via the 90% acquisition of Anderson Peru Mining and Exploration S.A.C. in 2007. Two acquisitions in Peru are held under a 100% owned Peruvian subsidiary; Compañía Minera Canadian Shield Perú S.A.C. Canadian Shield is focused on project generation and joint venture opportunities to provide shareholders with interests in a broad portfolio of South American mineral properties.

CEOCFO: Mr. Laskowski, you have a long history in the industry; why are you leading Canadian Shield today?

Mr. Laskowski: Canadian Shield is a unique opportunity that combines several of the things I really enjoy and several of the things that I have had a great deal of success with. Primarily three things, Ca-

nadian Shield is a company that has a very tight share structure, and therefore we are able to raise exploration funding without a great deal of dilution to the company and that provides a platform to focus on the other two things we are very excited about. Number two, the company has a portfolio of projects that is equivalent to that of a much larger company and that is the result of the company's programs over the last ten years. Within that portfolio of projects two of the projects have had a fair amount of work that in my minds eye, indicates that they have a great deal of potential to host more than 1 million ounces of gold. Now we are working to convert the existing exploration data to a certified 43-101 compliant gold resource. Then going forward we will expand those resources. The third thing that I am very excited about is the company has been focused in Peru, which is a fantastic destination for gold exploration. It has had a huge endowment of gold, and since 1993, Peru has come onto the gold production scene and is now one of the premier gold producing countries. It has favorable geology for discovery of new deposits. Canadian Shield has extensive experience, but more importantly, it has an extensive exploration database that I actually helped to create back in 1998 and 1999 with another company. Canadian Shield acquired this database from my prior company, so I am actually utilizing the database that I know has been successful at helping to locate new gold mineralization. Summarizing, we have funding ability, good projects in place with potential to develop gold resources, and thirdly we have good exploration upside for identifying new properties.

CEOCFO: Tell me a little about your properties and what is special about them?

Mr. Laskowski: We have two lead projects. In our business, we like to work in places that have proven gold production. Our Colpayoc project is located in the Yanacocha gold district, which is the largest gold producing district in South America and the second largest district if you look at North America and South America. The amount of gold coming out of Yanacocha right now is approximately 2 million ounces a year. Our Colpayoc project is located about sixteen kilometers south of one of the biggest producing mines in the Yanacocha district. The geology of Colpayoc, at certain levels, is identical to two very large gold deposits in the district, Cerro Corona and Minas Conga. Colpayoc is a porphyry gold system, which has seen only a small amount of drilling and a great deal of trenching. Historically the gold grade from the porphyry systems have been a little bit low, so they haven't been in favor for too long, but with the price of gold above \$800 an ounce these prospects look very attractive. The main target area of mineralization at the Colpayoc project, is the Daylight Zone which has 2500 meters of trenching and four drill holes. These results indicate that there is a minimum of 25 million tons of mineralization that is open to be expanded in all directions, and will grow to be much larger. Surrounding that main area there are five other areas with epithermal high-grade mineralization that remains to be explored. Our other lead project is called Estrella. Over the last three months, we have been working to quantify the exploration results on this property. There is clear potential for multimillion ounces of gold and silver here. We have 32 drill holes in this property, which defines a 1,200 meter long epithermal gold and silver system. As you might expect in this case, the geology and mineralization is not as simple as the porphyry system at Colpayoc. Estrella contains a complex interaction between stratigraphy and structures, and

as a result we have three types of mineralization. Putting all this data together, we can clearly see a minimum of 35 million tonnes of mineralization that has both gold and silver mineralization; however, this can be greatly expanded as mineralization remains open in several directions. Do to the large size of Estrella we need to do a bit more detailed evaluation of the distribution of the gold and silver, before we can commence drilling. Based on the results of this additional evaluation, we will march ahead with additional drilling to expand that resource size and also to identify and measure the highest grade portions of the system.

I am very excited about is the company has been focused in Peru, which is a fantastic destination for gold exploration. It has had a huge endowment of gold, and since 1993, Peru has come onto the gold production scene and is now one of the premier gold producing countries. It has favorable geology for discovery of new deposits. Canadian Shield has extensive experience, but more importantly, it has an extensive exploration database that I actually helped to create back in 1998 and 1999 with another company. Canadian Shield acquired this database from my prior company, so I am actually utilizing the database that I know has been successful at helping to locate new gold mineralization. Summarizing, we have funding ability, good projects in place with potential to develop gold resources, and thirdly we have good exploration upside for identifying new properties.

- Keith Laskowski, M. Sc.

CEOCFO: With the increased interest in gold, is it difficult to find personnel and equipment?

Mr. Laskowski: In our business, experienced people have been in short supply for quite a long time, and when I say experienced people, I am talking about those that have 15 to 25 years experience. So, independent of the gold market, it has been a problem and now with the increase in the value of gold, it has become increasingly difficult. I have been fortunate in that I started in my career in gold with the very first gold rush back in 1980 and I have been in the gold business since then. So as a result of that I have been

able to evaluate a lot of people. It is not easy to attract good people. However, going back to the original strategy that we discussed initially, if you can put together a company with a clean share structure that can raise funding, with great projects, then you can also attract good people. It all works together, and that is what we are counting on now.

CEOCFO: Do you joint venture your projects; what is your philosophy in the area of partnership?

Mr. Laskowski: That is always a very challenging question, and people usually want a yes or no answer. What I like to say is that each property that you look at

needs to have an exit strategy, and each exit strategy is totally dependent upon the results of the work done on each project. However, in the big picture, our strategy is to build value into the company through the identification of quality gold resources. While we are building these gold resources, we are seeking to identify a property that could host a a fairly large gold mine. As we advance, we will either venture the project on favorable terms, to an individual mining company that can put a large mine into production; or separately, we will build enough value in the company such that the buyer would have to look at acquiring the entire company. Either one of these strategies are acceptable and they both involve ventures in one form or

another. During the course of business, we strive to spend the least amount of money to obtain the most amount of value and therefore maximize the value to the company and to the shareholders.

CEOCFO: What is in your Regional Andean Gold Exploration database?

Mr. Laskowski: The database for the most part, is pretty similar to other company's databases. What is unique about this one is that I had the luxury of building this one when I was president of Gallant Minerals. Gallant Minerals was a privately funded company owned by Mohammed Al Fayed, the well known bil-

lionaire based in England. He is actually an Egyptian business man that owns many private corporations. We built a database drawing upon all of the readily available exploration data and combined it with all of the available remote sensing/satellite based data. We employed six full time remote sensing geologists, which is a large number. We were able to utilize the most advanced types of image processing available at that time to assist with identifying those areas with gold mineralization. This produced an extensive regional data set that identified the minerals often associated with gold deposits. You or I could go out and do this tomorrow if we had a half a million dollars available, but most companies don't want to spend that kind of money for this kind of product. This database can greatly increase our chances of finding new gold deposits.

CEOCFO: Are you looking to pick up any additional properties?

Mr. Laskowski: We are always keeping an eye open for better projects, or a better

deal. Right now, with our share structure we have pretty strong paper currency. We are investigating potential mergers and acquisitions as well. A part of my effort goes into evaluating these opportunities. However, it is very important to maintain a clear identity for our business so that our shareholders clearly understand what we want to do, our focus and why are we doing it.

CEOCFO: Would you tell us about your recent funding?

Mr. Laskowski: We just completed a financing raising \$2 million. We wanted to attract a group of strategic investors that would provide long-term support for our company. Several parties had approached us because they really liked our business plan and strategy, and they liked the results of the programs. We set out to raise about \$500,000 but the level of interest in the financing was enormous. At the time, we commenced raising money we were trading at about \$.90 per share. By the time we closed the financing the

stock price had gotten way ahead of the financing price and was trading at \$2.30.

CEOCFO: In closing, why should potential investors choose Canadian Shield Resources?

Mr. Laskowski: If I were an investor, I would look for exactly what we are building here, a Company with a low number or shares issued and trading; a Company with good projects, and a Company with potential to make new gold discoveries. We have about 14 million shares outstanding. We are trading in the \$1.60 range, but if you look at the number of ounces of gold in our projects, the value per share is exceptional and there is a lot of upside growth potential in the stock. We have an experienced team with a record of previous discoveries. This team will try to bring additional new discoveries to the Canadian Shield. Over the last six months, we've attracted some very respected investors that know this business and we are very honored to have them on our team as shareholders.
