**Unit 22, 60 West Wilmot St.
Richmond Hill, ON, Canada L4B 1C6
Phone: 905-731 9367**

**Blaine R. Webster
Chairman & CEO**

BIO:

Graduated from UBC in 1970 and was employed by INCO as a geophysicist 1971 to 1979. He worked in Ontario and Quebec to 1975 when he was appointed geophysicist to the Sudbury Basin. He also did regional analysis of geological and geophysical data to locate areas of high copper, zinc, and gold potential. He left Inco in 1979 and was employed as

head of ground and borehole surveys at Scintrex Ltd.

In 1983 he founded JVX a geophysical contracting company that has carried out surveys in 40 countries around the world. In 1986 he founded Goldeye Explorations and staked the Sandy Lake project. In 1990 he staked the Tyrrell property was discovered in 1993 and the Hydro Creek gold zone was discovered in 1993. In 1997 Goldeye was taken public and a drill program discovered the Big Dome High Grade gold Zone in 1998.

In 2005 Goldeye optioned the Todd (Stewart B. C.) and the Sonia gold silver project in Chile. In the fall of 2005 a drill program in Tyrrell Twp. on the Big Dome intersected 217g/t Au over 2.05m an undercut returned 2m of 85g/t Au and a second undercut intersected 1m of 34g/t Au. In November 2004 a hole under the 1998 1.4m of 149g/t Au intersected 1m of 44g/t Au.

The Big Dome High grade zone continues to be evaluated.

Company Profile:

Goldeye Explorations is focused on gold silver exploration in Ontario, British Columbia and Chile. Goldeye acquired large properties that have the potential to contain several deposits. Goldeye is presently focused on its High Grade "Big Dome"

gold discovery in Tyrrell township northern Ontario and its large epithermal gold silver property in Chile.

**Interview conducted by:
Lynn Fosse, Senior Editor
CEOCFOinterviews.com**

CEOCFO: Mr. Webster:, what is the focus of Goldeye today?

Mr. Webster: "The focus of Goldeye is basically gold exploration. We have three main properties. Our Tyrrell township property is 100 kilometers south of Timmins, we also have our Sandy Lake NW Ontario project, which is 200 kilometers north of Red Lake, and finally our Sonia project, which is 200 kilometers north of Santiago in central Chile. These are all, gold and silver projects."

CEOCFO: What is special about your projects?

Mr. Webster: "My experience is that I used to work for INCO in the 70s. We had huge databases and I developed a model for finding essentially base metal and gold camps. What we have done is targeted regional gravity anomalies that have the signature of Timmins or Kirkland Lake and we have both at Sandy Lake and Tyrrell, staked large pieces of ground on these. For example, Tyrrell had no mineralization when we staked it, but now we have intersections of two meters of 217 grams of gold. At Sandy Lake,

"Chile is the number one rated country for mining in the world, so there are huge porphyry copper deposits in Chile. They have none of the problems of Venezuela or anything like that. They have a good mining based country. They don't have oil, they have a lot of good wine and in the south, they have timber and very good hydropower potential. It's just like stepping into British Columbia in the 1950's when Bennett was building his dams, roads etc., It's an economy that is just developing with good mineral potential and very easy to put mines into production." - Blaine R. Webster

we have had a few showings on it, but now we identify it as a Goldcorp type ultramafic fold. We have six meters of about 11-12 grams gold from chip samples. Down in Chile, it's an epithermal type gold and silver project and we have good mineralization (7.5 g/t Au and 217 g/t silver over 5m) as well the mineralization occurs over a vertical extent of 1400 meters.

Goldeye targets large projects and it looks like we're going to have multiple deposits on these properties."

CEO CFO: What is the political climate like in Chile?

Mr. Webster: "Chile is the number one rated country for mining in the world, so there are huge porphyry copper deposits in Chile. They have none of the problems of Venezuela or anything like that. They have a good mining based country. They don't have oil, they have a lot of good wine and in the south, they have timber and very good hydropower potential. It's just like stepping into British Columbia in the 1950's when Bennett was building his dams, roads etc., It's an economy that is just developing with good mineral potential and very easy to put mines into production."

CEO CFO: Where are you in developing the various projects?

Mr. Webster: "Right now we are focused on Tyrrell, where we have spent over \$4 million. It is very accessible and is a look alike to the Kirkland Lake Gold Camp, with the same kinds of mineralization and geology. On the Hydro-Creek project, we have channel samples and drill holes up to 14 meters of 4 to 5 grams of gold and there is a meter of 10 grams in outcrop. We also have deep (300m) mineralization for example we have 14

meters of 4 1/2 grams. 1.5 kilometers to the east we have what we call the Big Dome, where we see the doming of the volcanics associated with diabase dykes. We have 5 samples of average over 3 ounces of gold over 2 meters. It has been drilled over a 200 meter strike length at the vertical depths of 550 meters. What we think we have looks like a pillow horizon, the time horizon with gold coming from hot springs onto the tops of the pillows. In addition, we have this over a strike length of 200 to 300 meters and down to vertical depths of 500 meters.

"What we have done is targeted regional gravity anomalies that have the signature of Timmins or Kirkland Lake and we have both at Sandy Lake and Tyrrell, staked large pieces of ground on these. For example, Tyrrell had no mineralization when we staked it, but now we have intersections of two meters of 217 grams of gold. At Sandy Lake, we have had a few showings on it, but now we identify it as a Goldcorp type ultramafic fold. We have six meters of about 11-12 grams gold from chip samples. Down in Chile, it's an epithermal type gold and silver project and we have good mineralization (7.5 g/t Au and 217 g/t silver over 5m) as well the mineralization occurs over a vertical extent of 1400 meters. Goldeye targets large projects and it looks like we're going to have multiple deposits on these properties." - Blaine R. Webster

We're 180 kilometers southwest of Kirkland Lake, and we're at the opposite end of the Round Lake batholith. We're the mirror image, so we have good potential for a large gold mining camp here."

CEO CFO: What is next year and going down the line going to be like for Goldeye?

Mr. Webster: "We're going to focus on advancing Tyrrell, getting our news out, and working with the Sandy Lake natives. We have a native community up there that are working to get permission to explore the Sandy Lake area. We are

also advancing our Chilean project slowly, because right now funds are going to be restricted and we really need to focus on Tyrrell to get somebody in there with us."

CEO CFO: How are you working through the current financial environment?

Mr. Webster: "Gold is king these days in the markets and there's a lot of people with money who are looking for good gold projects. We staked this project in 1990, and this is a self-generated project.

We've had it for 18 years and worked on it. We've had Gold Field out to property before and they are keeping in touch. Many companies like Kinross have raised \$700 million for projects. Our Tyrrell project is a good gold project with a combination of good width, good infrastructure, and high grade. Someone will be interested in it in this hot gold market."

CEO CFO: How do you get the investment community to pay attention?

Mr. Webster: "It's amazing when you walk around with five high grade gold samples, how you can get attention. We were out at the Cambridge show in Vancouver, and there

are tons of investors that are looking for companies to invest in. The big thing is to get the message out to the shareholders and any stock that's cheap with good gold an silver properties has to be looked at."

CEO CFO: In closing, why should investors consider Goldeye?

Mr. Webster: "Goldeye has multiple gold based projects, and we have a lot of investors interested in Goldeye. We also know a lot of mining companies, so we will carry on marketing this until we get it sold."
