

The Most Powerful Name In Corporate News and Information

No Longer Just A Diamond Exploration Company, Northern Superior Resources Is Now More Focused On Gold With Three Excellent Properties - Ti-pa-haa-kaa-ning (TPK) Gold Project And Thorne Lake Gold Project Un Northwestern Ontario, And Their Wachigabau Gold Project In Quebec

Thomas F. Morris
President, CEO and Director

BIO:

Thomas F. Morris (President, CEO and Director) is a registered, Professional Geoscientist with over 26 years experience of managing a variety of exploration activities and programs. Dr. Morris

joined Superior Diamonds Corp. in 2002 as a Project Manager, responsible for managing Superior's diamond exploration programs in Northwestern Ontario. In 2005, Dr. Morris was appointed Vice President Exploration and was subsequently appointed President and CEO in July 2007. At this time, Dr. Morris refocused the Company's exploration from diamonds to gold, rebranded and renamed the Company Northern Superior Resources Inc. Dr. Morris has managed, designed and implemented exploration programs and geologic studies for University, Government and exploration companies, including: the Geological Survey of Canada, Alberta Research Council, Ontario Geological Survey, University of Alberta, University of Western Ontario, Lake Shore Gold Corp. and Aurora Platinum. Dr. Morris received his PhD. (Earth Sciences) from the University of Alberta in 1988. Dr. Morris also sits on the Board of Directors for Maxy Gold Corp.

Company Profile:

Northern Superior Resources Inc. is a junior exploration company whose focus is exploring for gold on the Superior Province of the Canadian Shield. The Company is a reporting issuer in British Columbia, Alberta, Ontario and Quebec, and trades on the TSX Venture Exchange under the symbol SUP.

Interview conducted by:
Lynn Fosse, Senior Editor
CEOCFOinterviews.com

CEOCFO: Mr. Morris, how has Northern Superior Resources changed in the two years that you've been in charge?

Dr. Morris: "It's changed on a couple of fronts. The most important thing is that we were originally focused solely on diamond exploration. I really do believe in the diamond projects that we have, but it became very obvious that the markets were not interested in junior exploration companies exploring for diamonds. However, we were very fortunate, because as we were doing our exploration, we analyzed our overburden samples not only for diamond indicator minerals but also for all types of mineralization, so essentially we had also been prospecting for gold and base metal mineralization. This gave us a tremendous database, with a number of excellent targets for gold and base metals, so I made the decision two years ago that we needed to change our focus from being solely diamonds and place it more on gold. What we have done in a very short period of time is to bring forward three excellent gold projects; our Ti-pa-haa-kaa-ning (TPK) Gold Project, Northwestern Ontario, our Thorne Lake Gold Project, Northwestern Ontario, and our Wachigabau Gold Project in Quebec. To go along with that, we've changed the name of the company from Superior Diamonds to Northern Superior Resources and we have rebranded the company and upgraded and improved our website."

CEOCFO: Where are you with your projects and what do you like about them?

Dr. Morris: "All three gold properties that have brought forward are exceptional and I'm not just saying that as the President and CEO of the company. We are told this by independent contractors and even from our competitors that any one of these three gold properties would be a

crown jewel in any other junior's portfolio. Our main focus has been on our Ti-pa-haa-kaa-ning gold project up in Northwestern Ontario and what we have discovered there so far is a brand new greenstone belt, which is a type of rock that is commonly associated with gold deposits. What we have also discovered is something called a gold grain dispersal apron. What this means is that within overburden or dirt samples collected from over a specific area of the property, we have found an exceptional number and size of gold grains from 10 kilograms of overburden material collected. To put this into perspective, this apron is deemed by independent contractors as the third largest gold grain dispersal apron in North America, so this is very large. We are looking at something that has a source area of potentially 6 kilometers wide with individual gold grains being eroded out of the rock surface and being dispersed away from the rock as long as 15 kilometers. So this is a very large dispersal apron. The Meladine Project up in Nunavut is the largest gold grain dispersal train and the Rainy River gold grain dispersal train in the Fort Francis area in Northwestern Ontario is probably about the same size as what we are looking at here in Northwestern Ontario. Also with the drill program we had last year, we have intersected shear zones that are gold bearing and may in fact, actually host the significant gold grain that have been dispersed into the overburden. This discovery is exceptional. The only other important point to make is that if you find 15-25 gold grains in an overburden sample, people get excited about it. What we're finding is upwards of 1200 plus gold grains in one of our samples."

CEOCFO: What causes that?

Mr. Morris: "The indication is that there must be an exceptionally large amount of gold grains in the rock surface somewhere at the head of the dispersal apron on our property. The fact is that the gla-

cial ice must have a reasonably large target to scrape and incorporate these gold grains into the base of the glacier to deposit them, telling us that there must be a significant source sitting at the head of the apron somewhere, so that's very exciting.

With the Thorne Lake Project, we are going to be embarking on an exploration project up there this summer. What is neat about this project is that although we also have a number of overburden samples with anomalous gold grain values,

"All three gold properties that have brought forward are exceptional and I'm not just saying that as the President and CEO of the company. We are told this by independent contractors and even from our competitors that any one of these three gold properties would be a crown jewel in any other junior's portfolio. Our main focus has been on our Ti-pa-haa-kaa-ning gold project up in Northwestern Ontario and what we have discovered there so far is a brand new greenstone belt, which is a type of rock that is commonly associated with gold deposits. What we have also discovered is something called a gold grain dispersal apron. What this means is that within overburden or dirt samples collected from over a specific area of the property, we have found an exceptional number and size of gold grains from 10 kilograms of overburden material collected. To put this into perspective, this apron is deemed by independent contractors as the third largest gold grain dispersal apron in North America, so this is very large."

- Thomas F. Morris

we also have something that we can compare directly too. This property is on a greenstone belt called the Ellard Lake Greenstone Belt, 15 kilometers due west from the Sachigo River Gold Mine, which was one of the richest gold mines in North America up until World War II. The Ontario Geological Survey in 2002 did a fair bit of overburden sampling down ice and within the vicinity of, the old Sachigo River Gold Mine. From this work, they published a report describing a gold grain dispersal train extending off that gold mine. So we have a thumb print of what a gold mine looks like in the till.

We completed an overburden sampling program on our Thorne Lake Property back in the fall of 2008. From this work, we defined two gold grain dispersal trains that are as big if not larger than the one extending from the Sachigo Lake Gold Mine. We also defined a third, but smaller one on the property. The implication from the dispersal trains is that we may have at least a couple of areas of gold mineralization at the head of these dispersal trains that are as large if not larger than the Sachigo River Gold Mine, so that is very exciting.

Our last active gold project and certainly not the least, is our Wachigabau Gold Project in Quebec. This project actually used to be our L'Esperance Diamond Project. Under the old joint venture agreement that we had with Matamec Explorations Inc. ("Matamec"), we could only explore for diamonds on this property. Therefore, we went back to Matamec last fall, renegotiated the joint venture, and we now have access to all commodities on the property. We are pretty excited about that because we've essentially parachuted our shareholders right into the middle of a major gold camp in Quebec. This is a project where we will be doing some field exploration there this summer with the intent of establishing drill targets for the fall. We are doing the same for the Thorne Lake Project. Currently with our Ti-pa-haa-kaa-ning Gold Project, we are negotiating an exploration program for this year with our joint venture partner, Lakeshore Gold. For our Thorne Lake project, International Nickel Ventures Corporation is earning in on that property right now."

CEOCFO: What is the financial picture like for Northern Superior?

Mr. Morris: "First of all, the Wachigabau property is a very inexpensive project to run, simply because we can drive onto the property. We have done a lot of work on the property already, when we were exploring for diamonds over the last

2 or 3 years. We have done a lot of compilation of data from the Quebec government databases as well as our own and we already have a pretty good idea where there are targets on the property for drilling. The neat thing about working in Quebec of course is that we have an excellent working relationship with Waswanipi First Nation, and we are also getting a good tax rebate for working in Quebec. It is an excellent place to do work and it is a relatively cheap project. For Thorne Lake, International Nickel Ventures is earning in on that property, so they are funding the project and we are the operator on that project. We have a very aggressive exploration and drill program planned for that property this summer and that should be finished sometime in this 4th Quarter. For Ti-pa-haa-kaaning as I said, we had money aside to exploration there this year, but we are talking to our JV partner there, Lakeshore Gold, about the right kind of exploration program for this project, in order to set up drill programs there for later this year or early in the first quarter of 2010. Financially, we are in pretty good

shape. We are projecting right now to have a budget of about \$1.3 million going into 2010. We have been very prudent with our shareholder's money while adding value to our Properties. Also with these funds, we have been able to retain an incredible staff. I know you here this from a lot of juniors, but we really do have a tremendous exploration team here and you need the best people in order to make these significant discoveries and move them forward."

CEOCFO: Is it the nature of the projects that have attracted the quality people?

Mr. Morris: "Yes. I think that the Ti-pa-haa-kaaning Gold Project in Northwestern Ontario allowed me to recruit a couple of top-notch geologists. This includes Don Boucher who was at DeBeers Canada. Don is a senior geologist who has worked all over the world, not only with experience in diamonds, but he also has a strong background in gold. Tom Hart has worked with Inco in the past, a number of junior company's and the Ontario Geological Survey. His expertise is in gold geology and I believe he also saw the

tremendous potential in the projects. Both of those individuals as well as myself are registered, professional geoscientists in Ontario and Quebec. We have a geological technician here by the name of Matt Sooley, who is a graduate from Cambrian College in Sudbury. Matt is essentially our field logistics specialist, geologic technician and is very good with data management. I have another fellow by the name of Steve Van Haaften who is responsible for our data management. He is the fellow that actually set up the Ministry of Northern Development and Mines data management system. You won't find a better data manager."

CEOCFO: Are you looking at any other properties?

Mr. Morris: "The reality is that we are really not in the position at this point to really take on too much more. We do want to focus and make sure that we are not over-extending ourselves. However, that being said we always consider other opportunities."
