The Coronavirus Vaccine Gold Rush Scam

I am NOT a scientist or an economist, but I do conduct a lot of research. I speak with many experts in various fields and I love acquiring knowledge. The opinions expressed in this article are my own. They are straight to the point, hard hitting and presented in a take no prisoners' manner. I am NOT an anti-vaxxer, nor do I subscribe to any crazy conspiracy theories. On the contrary, I am a proponent of vaccines so long as they are safe. Vaccines have played an important part in the safety of the public and have eradicated the threat of diseases like polio and the measles, and we need to continue research to develop new vaccines in the future.

No political angle: only opinions based on scientific information

The promise of a coronavirus vaccine is a well-planned scam

Recently, three companies working on COVID-19 vaccines, Moderna, Pfizer and BioNTech announced their upcoming coronavirus vaccines will require ultra-low storage temperatures. Moderna announced their vaccine requires a temperature of negative 4 degrees Fahrenheit, while the ones from Pfizer and BioNTech need to be stored in negative 94 degrees Fahrenheit.

"These storage conditions would make traditional office or pharmacy administration very difficult," SVB Leerink analysts wrote in a note to investors on Thursday. "These conditions could be met at tertiary hospitals and laboratories and could be accommodated in intensive

one-day vaccination events at such sites, but this would still only cover a fraction of the healthy population."

Vaccines have failed to deliver lasting immunity

The North Pole is not cold enough to store these vaccines. Could this be a diversionary tactic on the part of the pharmaceuticals to divert from the fact they really do not have a safe and effective vaccine?

AstraZeneca, in collaboration with Oxford University has started a 30,000-volunteer phase three clinical trial "*manslaughter*" in the United States. AstraZeneca is telling us their vaccine produces a good immune response, adding that neutralizing antibodies were produced and the vaccine has caused a T-cells reaction to help destroy the cells that have been taken over by the virus. Of course, a vaccinated person will have extra neutralizing antibodies initially in the first weeks after vaccination. But what happens to those neutralizing antibodies three months later? The same is true for the T-cells jumping into action. Of course they will jump into action at the start, but how long will that defense last?

Novavax and Johnson & Johnson have already begun selling their vaccines to western countries even though they have yet to be proven safe or effective. Novavax announced a promising immune response on their applications for two vaccine three weeks apart, including an adjuvant (booster) meant to boost its effect. 60% to 80% of the volunteers had side effects including pain, fatigue, muscle fatigue, headaches and injection site tenderness etc. Once again there is no confirmation of how long the neutralizing antibodies actually lasted.

Now Gilead is using political lobbyists to pressure the authorities to license another useless product similar to Remdesivir. These pharmaceutical companies that are peddling false hope to the public will eventually pay the price for their manipulation of data and their exploitation of election year politics

The vaccines trials are a money grabbing fraud; the cold storage issue is just a distraction

The new concern of ultra-low temperature cold storage could be a distraction from the real issue, lack of lasting neutralizing antibodies. Several recent studies have shown that COVID-19 neutralizing antibodies do not last long. Most recovered patients have little or no neutralizing antibodies after 3 months post infection. Without neutralizing antibodies there can be no vaccine and no herd immunity, yet companies like Moderna have secured hundreds of millions in government grants and billions in stock appreciation.

In the past six months Moderna's market capitalization has increased from about \$9 billion to more than \$25 billion. Along the way, Moderna's CEO Stéphane Bancel became a billionaire overnight. Moderna executives have dumped millions of shares and pocketed many millions of dollars during the recent rise in stock price. If they truly believe they have a successful vaccine, why would they sell now when they could wait just a little longer and make many times more money? Maybe they really do not believe what they are telling the public about their vaccine?

A bit of humor because we all need to laugh

Unconditional Love

A rich man's wife and dog were kidnapped and held for ransom. The rich man paid the ransom and was instructed to go to a parked car where he would find his wife and dog in the trunk of the car. As he approached the car, he can hear the dog barking and his wife screaming. When he opened the trunk, the dog jumped with happiness, wagging his tail and licking his master. His wife on the other hand yelled, "What the hell took you so long. The moral of the story is, there is no other love like the love of a dog.

Topics for Future Op-eds

- **Another perspective on who really won World War II**

History is always written by the winners. Stalin was the real catalyst in beating the German army, not the Allied Forces. Read my novel, ["Sadness with Joy."](#) In

August of 1942 the Dieppe Raid was a planned failure by British Prime Minister Winston Churchill in order to dissuade U.S. President Roosevelt from opening a second front in France. His actions caused 3,337 unnecessary Canadian casualties.

- **Artificial intelligence will run our court system within 20 years**

IBM's supercomputer Watson was developed to run our day to day lives. Already in limited use in the judicial system, Watson will eventually completely take over the court system without political, emotional, or personal bias. It will deal strictly with the law and the facts, nothing more. IBM's Watson is the future in the 21 Century.
