Issue: **April Update 2020**

## Emil Malak Wrote!

### **The Coronavirus Vaccine Gold Rush Scam April 2020 Update**

I am NOT a scientist or an economist, but I do conduct a lot of research. I speak with many experts in various fields, and I love acquiring knowledge. The opinions expressed in this article are my own. They are straight to the point, hard hitting and presented in a take no prisoners' manner. I am NOT an anti-vaxxer, nor do I subscribe to any crazy conspiracy theories. On the contrary, I am a proponent of vaccines so long as they are safe. Vaccines have played an important part in the safety of the public and have eradicated the threat of diseases like polio and the measles, and we need to continue research to develop new vaccines in the future.

**No political angle: only opinions based on scientific information.**

### **COVID-19 could leave permanent damage in 10% to 20% of coronavirus patients**

This coronavirus could be much more dangerous in some patients than any previous respiratory diseases or pandemics. The virus presents itself with respiratory symptoms then could become a microvascular disease.

<https://www.ceocfointerviews.com/voippaloped10080420.html>

<https://www.ahajournals.org/doi/pdf/10.1161/CIRCULATIONAHA.120.050354>

COVID-19 often begins as a mild upper respiratory tract infection that most people seem to recover from. However, between 10% to 20% or more of COVID-19 patients can potentially develop deep lung inflammation, pneumonia, acute respiratory distress syndrome which can result in organ damage, organ failure or possibly death.

### **Coronavirus could be with us for the next ten years**

Many so-called scientists are making claims that the coronavirus is dying out in the host and the numbers of infections are going down. These claims are scientifically baseless and in some cases propaganda. COVID-19 is proving to be much more complex and dangerous than previous pandemics. The virus has the ability to remain asymptomatic

and can also spread through the circulatory system causing long lasting or permanent organ damage. The numbers may be appearing to go down since not everyone is being tested, but the statistics are misleading. We will not be able to resume all the same activities we did before the outbreak. Post-pandemic life will be different.

### **One third of Western European companies will be bankrupt in 2021**

By the end of 2021, Western European businesses will have filed for bankruptcy in unprecedented numbers because of the pandemic. Zombie companies, specifically in Germany and other parts of Europe that have been barely hanging on because of extremely low interest rates will no longer be able to keep their businesses going. Over a third of European companies will not survive. The government needs to prepare a plan of action before people take to the streets in acts of civil unrest and violence.

#### **Rapid testing for everyone is the only solution**

Only one practical solution can bring back the economy completely, and that is to implement constant widespread rapid testing for everyone. Every corner of every city and town should be equipped with an ambulance style mobile testing unit, easily accessible to everyone. An app on your mobile phone will show your most recent test results confirming a negative COVID-19 test. Anyone who tests positive can self-quarantine and receive the appropriate medical care. Over 100,000 converted ambulances would need to be deployed throughout the United States to carry out this mission. Even if the virus were to disappear in a few years, the converted ambulances would be ready should the need arise with a future disease. I have recommended this plan of action in a [previous article](https://www.ceocfointerviews.com/voippaloped7052620.html) where I suggested the army would be best suited to organize such a campaign.

<https://www.ceocfointerviews.com/voippaloped7052620.html>

If Germany falls economically, the European Union will fold. Eastern and Central European countries are in a much better position to survive than Western Europe. Shopping malls, hotels airlines, international tourism, retail outlets, sports arenas, and sports franchises have already lost an incredible amount of their value, and this is only the beginning. Unfortunately, such an economic collapse can potentially lead to another major war. My guess would be with Iran.

Ineffective vaccines will not save us from the pandemic or the financial and political fallout. Developing an effective therapeutic treatment that will cure people with COVID-19 is the only thing that can reverse the tide and save us from the disastrous effects of the coronavirus.

### **Athletes Myocarditis**

According to Penn State's director of athletic medicine, around one-third of Big Ten athletes who tested positive for COVID-19 appear to have myocarditis, an inflammation of the heart muscle that reduces the heart's ability to effectively pump blood.

Athletes are extremely fit individuals and in general are in better physical condition than the average person. Since the coronavirus is showing an ability to affect the heart muscles in these elite athletes, we need to clarify whether there were preexisting conditions present and what are the probabilities of permanent damage?

### **The promise of a coronavirus vaccine is a well-planned scam**

Recently, three companies working on COVID-19 vaccines, Moderna, Pfizer and BioNTech announced their upcoming coronavirus vaccines will require ultra-low storage temperatures. Moderna announced their vaccine requires a temperature of negative 4 degrees Fahrenheit, while the ones from Pfizer and BioNTech need to be stored in negative 94 degrees Fahrenheit.

"These storage conditions would make traditional office or pharmacy administration very difficult," SVB Leerink analysts wrote in a note to investors on Thursday. "These conditions could be met at tertiary hospitals and laboratories and could be accommodated in intensive one-day vaccination events at such sites, but this would still only cover a fraction of the healthy population."

### **Vaccines have failed to deliver lasting immunity**

The North Pole is not cold enough to store these vaccines. Could this be a diversionary tactic on the part of the pharmaceuticals to divert from the fact they really do not have a safe and effective vaccine?

AstraZeneca, in collaboration with Oxford University has started a 30,000-volunteer phase three clinical trial "*manslaughter*" in the United States. AstraZeneca is telling us their vaccine produces a good immune response, adding that neutralizing antibodies were produced and the vaccine has caused a T-cells reaction to help destroy the cells that have been taken over by the virus. Of course, a vaccinated person will have extra neutralizing antibodies initially in the first weeks after vaccination. But what happens to those neutralizing antibodies three months later? The same is true for the T-cells jumping into action. Of course they will jump into action at the start, but how long will that defense last?

Novavax and Johnson & Johnson have already begun selling their vaccines to western countries even though they have yet to be proven safe or effective. Novavax announced a promising immune response on their applications for two vaccine three weeks apart, including an adjuvant (booster) meant to boost its effect. 60% to 80% of the volunteers had side effects including pain, fatigue, muscle fatigue, headaches and injection site

tenderness etc. Once again there is no confirmation of how long the neutralizing antibodies actually lasted.

Now Gilead is using political lobbyists to pressure the authorities to license another useless product similar to Remdesivir. These pharmaceutical companies that are peddling false hope to the public will eventually pay the price for their manipulation of data and their exploitation of election year politics

### **The vaccines trials are a money grabbing fraud; the cold storage issue is just a distraction**

The new concern of ultra-low temperature cold storage could be a distraction from the real issue, lack of lasting neutralizing antibodies. Several recent studies have shown that COVID-19 neutralizing antibodies do not last long. Most recovered patients have little or no neutralizing antibodies after 3 months post infection. Without neutralizing antibodies there can be no vaccine and no herd immunity, yet companies like Moderna have secured hundreds of millions in government grants and billions in stock appreciation.

In the past six months Moderna's market capitalization has increased from about \$9 billion to more than \$25 billion. Along the way, Moderna's CEO Stéphane Bancel became a billionaire overnight. Moderna executives have dumped millions of shares and pocketed many millions of dollars during the recent rise in stock price. If they truly believe they have a successful vaccine, why would they sell now when they could wait just a little longer and make many times more money? Maybe they really do not believe what they are telling the public about their vaccine?

<https://www.verywellhealth.com/covid-19-antibodies-shed-quickly-5072281>

### **Return government monies; phony vaccine promises must be punished**

Developing and owning a coronavirus vaccine has become a political biotech arms race. There is a colossal monetary and political gain in turning the coronavirus pathogen into profit.

The government should demand the return of public monies which were obtained by some of these pharmaceutical companies on the false pretense of a coronavirus vaccine. An enquiry into these false claims is long overdue. We need to adjust to living with Coronavirus. We need to involve the military to coordinate the continuous rapid testing of all people. Everyone with a negative test result can display it on their mobile device and move about freely. Our focus should be on developing therapeutic solutions that cure people and save lives. It's time to drop this fraudulent vaccine pipe dream.

## **A bit of humor because we all need to laugh**

### **Unconditional Love**

A rich man's wife and dog were kidnapped and held for ransom. The rich man paid the ransom and was instructed to go to a parked car where he would find his wife and dog in the trunk of the car. As he approached the car, he can hear the dog barking and his wife screaming. When he opened the trunk, the dog jumped with happiness, wagging his tail and licking his master. His wife on the other hand yelled, "What the hell took you so long. The moral of the story is, there is no other love like the love of a dog.

### **Topics for Future Op-eds**

- **Another perspective on who really won World War II**

History is always written by the winners. Stalin was the real catalyst in beating the German army, not the Allied Forces. Read my novel, ["Sadness with Joy."](#) In August of 1942 the Dieppe Raid was a planned failure by British Prime Minister Winston Churchill in order to dissuade U.S. President Roosevelt from opening a second front in France. His actions caused 3,337 unnecessary Canadian casualties.

- **Artificial intelligence will run our court system within 20 years**

IBM's supercomputer Watson was developed to run our day to day lives. Already in limited use in the judicial system, Watson will eventually completely take over the court system without political, emotional, or personal bias. It will deal strictly with the law and the facts, nothing more. IBM's Watson is the future in the 21 Century.
